

SPROUT TORCH®

REFRESH YOUR LOOK

Sprout Torch® is an innovative solution developed to help control sprouting in potatoes, specifically designed to maintain quality and extend shelf life. Formulated with efficacy in mind, it offers an environmentally responsible approach to sprout inhibition, ensuring optimal results throughout storage.

Key Features

Rescue Product

Burns peeps & sprouts at the surface of the potato

Fast Acting

Within a few days of treatment, sprouts turn black & drop away

Organic

Active ingredient is clove oil, a natural compound certified for organic use

Enhance Visual Appearance

Potatoes look rejuvenated & ready for market

Versatile Application

Suitable for use in storage or as a line spray or drip application

ACTIVE INGREDIENT

Clove Oil

FORMULATION

Liquid

PRODUCT PACKAGING

5 gallon jugs

APPLICATION RATE

1 gal / 3500 cwt ()
per application

*Dependent on storage conditions

Benefits

Fresher Look: Sprout Torch® is ideal for all potato varieties that have started to sprout and need to be upgraded for shipping.

Certified Organic: The active ingredient, clove oil, is an organic compound approved by the Washington State Department of Agriculture Organic Food Program.

Improves Pack-Out: Reduces the number of sprouted potatoes, leading to better quality and higher yields.

Boost Potato Quality: Restores potatoes' fresh appearance, minimizing shipment rejections and boosting the value of previously rejected potatoes.

How It Works

Sprout Torch® is applied directly to potatoes in storage, where it interacts with existing enzymes to suppress sprout growth effectively. This mechanism not only inhibits sprouting but also ensures that the quality of potatoes is preserved, meeting both aesthetic and nutritional standards.

Untreated Norkotah

Norkotah treated with Sprout Torch®

Application

Sprout Torch® can be applied in storage with regular thermofogging equipment. Due to its distinctive short-term odor and flavor, a wait of at least 3 days is recommended before packing. The benefits are effective for up to 2-3 weeks, depending upon the storage temperature and sprout susceptibility of the potatoes. Consult with our team for tailored application advice.
